

SOLUCIÓN

The screenshot shows a software interface for managing room reservations. The top navigation bar includes 'Gestión de salas', 'Salas', and 'Reservas'. On the right, there are notifications for 1 message and 1 new comment, and a user 'Administrator (root)'. The main area is titled 'Gestión de reservas' and contains a table with the following columns: 'Nombre Sala', 'Capacidad', 'Fecha Reserva', 'Reservada', and 'Comentarios'. A single row is visible for 'Sala Gris' with a capacity of 10. There are buttons for 'NUEVO' and sorting. Filter options at the top right allow searching by 'Reservada' status ('No') and applying filters.

This screenshot shows the same software interface with a detailed filter dialog open over the reservation list. The dialog allows for creating a custom filter. It includes fields for 'Añadir filtro personalizado', dropdowns for 'Reservada' (set to 'No') and 'Condición' (set to 'ales'), and buttons for 'APLICAR' and '+AÑADIR CONDICIÓN'. The underlying table data remains the same as in the first screenshot.
